Other evaluation metrics

• **BLEU:** Bilingual Evaluation Understudy

• **ROUGE:** (Recall-Oriented Understudy for Gisting Evaluation)

• **METEOR:** (Metric for Evaluation of Translation with Explicit ORdering)

Other MT evaluation metrics

• BLEU (Bilingual Evaluation Understudy)

- A score for evaluating the performance of a MT.
- BLEU score compares automatically translated sentences (hypothesis) with one or more reference translations.

• ROUGE (Recall-Oriented Understudy for Gisting Evaluation)

- Usually used for evaluating the quality of text summaries.
- ROUGE compares word sequences, word pairs, and n-grams with a set of reference summaries created by humans.
- Many ROUGE variants such as
 - ROUGE-N (Overlap of N-grams between the system and reference summaries)
 - **ROUGE-L** (Longest Common Subsequence (LCS) based statistics)
 - ROUGE-W (Weighted LCS-based statistics that favors consecutive LCSes)
 - **ROUGE-S** (Skip-bigram based co-occurrence statistics)
 - **ROUGE-SU** (Skip-bigram plus unigram-based co-occurrence statistics).

• METEOR (Metric for Evaluation of Translation with Explicit ORdering)

- METEOR or is another metric used to evaluate the performance of a MT model.
- METEOR compares Standard word segments with the reference texts. Stems and synonyms are also considered for matching.
